

## DMX5 Personal Edition for Windows Digital Signage Software Solution

### Key Benefits Include:

- >> Lifetime Licenses
- >> No recurring charges
- >> 1-Click Windows Installer
- >> Browser Management Interface

# DMX5-W personal edition

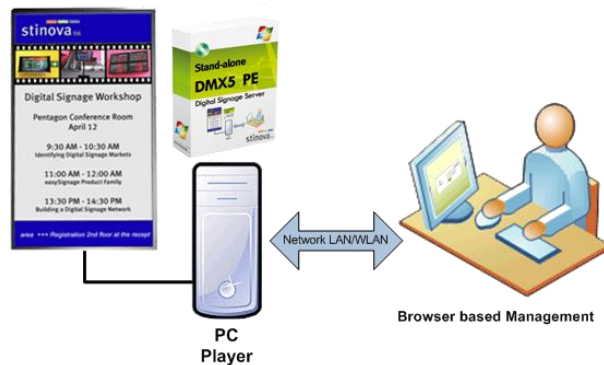

Get up and running quickly with the intuitive DMX5 management software

DMX5 personal edition (PE) is a comprehensive but easy to use software application for the stand-alone screen applications. DMX5 PE simplifies the composition of content elements and provides an easy to use interface designed so that non-technical user can manage a digital screen in a local network. DMX5 PE is delivered as a Windows Software Installer and wrapped in WAMP (Apache, MYSQL, PHP) running on Windows XP or Windows 7 (32 and 64 bit).

The DMX5-W Personal Edition Software can be installed on any Windows PC running Windows 7 32- or 64-bit version.

DMX5-W Personal Edition for single screen management

Stinova's Digital Signage editions are easy to install with a 1-Click-Windows installer and let you get started with a few clicks.

## Main features of DMX5 Software Management Component

The following feature list of our DMX 5 Personal Edition main features are depending on the different license packages

- **Content Manager** – allows to upload content such as Video, Images, Flash, Audio, Power Point from your local PC to the server repository
- **Playlist Manager** – Supports playlist formats such as Full-screen, Composer, Zone Playlists
- **Calendar & Scheduler** – Supports Scheduling with Weekly and Monthly Calendar views
- **Resolution Manager** – Allows to manage any kind of screen resolutions for playlist creation
- **User Manager** – Create different users with different system permissions
- **Playlist Export & Import** – Allows to export and import playlists from or to other server accounts

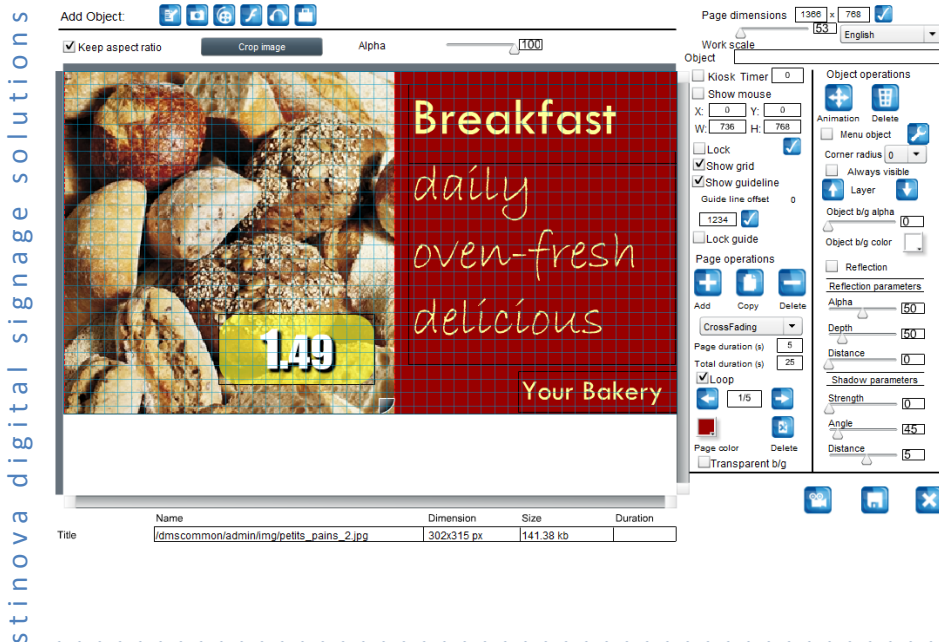

# DMX5 software overview

Intuitive WEB based management software

## Key productivity tools of the management software

- Drag-and-drop layout, design, and zone manipulation tools.
- Playlist folders for organizing content.
- "Ad hoc" function. Quickly update messages right at a screen to issue announcements, send out alerts, or make a layout change on the fly.
- Enables you to e-mail a presentation to another user right from the software interface — a real time-saver in collaborative workflows.
- Kiosk mode makes it easy to create simple interactive menus, either from the composer or zone-based HTML pages.
- Grid and guidelines for content positioning and pixel exact positioning allows accurate playlist and template creation.
- Choose a language: English, French, Spanish, Portuguese, German, Italian, Danish, Swedish, Norwegian, Polish, Czech, Russian, Arabic, Greek, Japanese and Simplified or Traditional Chinese.

# DMP client play-out software

To satisfy diverse Digital Signage requirements and provide maximum flexibility and hardware support, Stinova provides the DMP-W play-out software for PC platforms running Windows 7 or Windows XP. DMP Software synchronizes via pull mode thru HTTP protocol and runs on DMX Personal Edition from localhost.

## Unleash the maximum flexibility of play-out features

### Main features of DMP-W

The following feature list shows the capabilities of our DMP software package.

- **Content Format Support** – Video, Images, Flash, Audio, Power Point, Text, RSS Ticker, Video Stream, Audio Stream, HTML Page, TV tuner & Video Capture Card (requires additional license),
- **Various Playlist Format Support** – Supports playlist formats such as Full-screen, Composer, Zone Playlists
- **Hibernation Mode Support** – Allows to switch the player off in hibernation mode at a predefined time window
- **Update Manager** – Allows auto-update of the player software
- **Screensaver Support** – Player can be configured to be activated as a screensaver
- **Management via USB Storage** – Allows to charge player with USB storage device with full-screen content or exported playlists
- **Multi-Screen VideoWall Support** – Allows play-out support for multi-headed graphics cards

### Minimum PC Hardware Requirements

The minimum hardware requirements of the PC based hardware players are dependent on several factors such as required content formats, update cycles, content size and interactive usage. We recommend minimum Core 2 Duo Class with 2 GB of RAM and 80 GB of mass storage. For Full HD video playback support the minimum requirement is using GPU accelerated graphics card drivers. For CPU intensive based content we recommend Intel Core i5 or i7 platform.
